Polyclonal Rabbit anti-Serotonin (5-HT)

Clone no. -

MONOSAN

**Additional info**

Serotonin is produced by endocrine cells of the stomach, duodenum and ileum. The polyclonal antibody to serotonin can be used to differentiate tumors of serotonergic origin. The antigen localization is cytoplasmic.

<br>Absorption with 10-100 ug serotonin per ml diluted antiserum abolishes the staining.

Positive control: duodenum.
